PROFESSIONAL SUMMARY

An experienced IT professional **as a Full-Stack Java Developer**, understanding business requirements and building optimal scalable solutions to achieve high business growth in an Agile environment by upgrading to the latest tech stack and platforms.

SKILLS AND CERTIFICATIONS

- **Technologies:** C, Java, Python, Angular, Node, JavaScript, TypeScript, Shell, Spring Boot, Vert.x, Django, HTML, CSS, Bootstrap, Apache Kafka, MySQL, Postgres, DB2 (Relational Databases), Mongo DB (NoSQL).
- **Cloud:** **Amazon Web Services** - EC2, EBS, RDS, S3, Lambda, Kubernetes ; **Azure** - Service Bus, Event Hubs, Storage Accounts, AKS, APIM, Function App
- **Tools** Git, Postman, J2EE, JDBC, Maven, Gradle, JMeter, Docker, Swagger, Splunk, Log4j, Mockito, Junit, OPA.
- **Certified Java SE6 Professional.**

PROFESSIONAL EXPERIENCE

Software Developer 3 Oracle

Oct 2024 - Present

- Working with the **IDCS (Identity Cloud Service)** team to support identity and access management integrations within **Oracle Cloud Infrastructure (OCI)**.
- Worked on the email delivery system from CNS (Cloud Notification Service) to Email Delivery (ED), ensuring service continuity and compliance with platform standards.
- Addressed **security central (Sec Central)** tickets by upgrading library versions and remediating vulnerabilities.
- Developed and maintained RESTful APIs using **Spring Boot, Berkeley DB (BDB), and sharded data architectures** to handle large-scale, partitioned data sets.
- Participated in on-call rotations and PagerDuty escalations, resolving production issues, customer-reported problems, and coordinating safe deployments.
- Automated repetitive JIRA workflows by generating structured templates using Jinja2 (.j2) files, improving efficiency and consistency for the team's operational tasks.

Full Stack Software Engineer Sanquest Inc

Sep 2023 - Oct 2024

- Developed and maintained Spring Boot microservices to manage product and customer data, ensuring scalability and modular design in a distributed architecture.
- Designed and implemented **GraphQL APIs** to enable flexible, efficient data querying and used **Argo CD** for GitOps-based continuous deployment.
- Scheduled and managed background jobs using **@Scheduled** and **cron** expressions in Spring Boot to handle automated data processing tasks.
- Implemented **JWT**-based authentication and integrated **Open Policy Agent (OPA)** for fine-grained, context-aware authorization policies; Secured and exposed internal APIs via **Azure API Management (APIM)**
- Built asynchronous communication pipelines between microservices using **Azure Service Bus and Event Hubs**, improving system decoupling and message reliability.
- Utilized a **Java Agent** to capture and forward application logs to the observability team, enabling centralized log streaming to **Grafana** for real-time monitoring and analysis.
- Deployed and orchestrated services using **Azure Kubernetes Service (AKS)**, enabling auto-scaling, seamless rollouts, and resilient infrastructure.

Full Stack Software Engineer Machine Learning Technologies

Jun 2022 - Jun 2023

- Worked on Payment Orchestration service that helps merchants rerun their transactions to reduce the decline rate.
- Responsible for building the Rest APIs using **Spring Boot & Vert.x** for PoConfig and Metis-RuleConfig services that handle the profile and rules of every merchant and portfolio, respectively.
- Implemented unit and integration tests using **Junit** and **Mockito** frameworks to ensure code quality in the TDD environment with 90% code coverage.

- Designed database Schemas according to the business requirements using **Hibernate and Spring Data JPA** annotations.
- Enhanced **security authorization and authentication** via Spring Security and CGI Gateway.
- Performed peer-to-peer code reviews and ensured the code quality using **SonarQube**, and familiar with **Splunk** and debugging using Logs.
- Deployed applications to different environments using **Kubernetes** and documented REST API endpoints using **Swagger**.

Software Analyst
Goldman Sachs

Sep 2021 - Jun 2022

- Worked on Financial services internal to Goldman Sachs, which deals with one million investments, funds, and around 5000 investors, respectively, with comprehensive functional and unit testing.
- Designed and developed Micro-services that help clients to get Analytical data using **Java 8 and Spring-Boot** following industry-adopted **design patterns**.
- Implemented server-side cache using **Redis** to load the entire data while managing data warehouses.
- Processed and ingested data into **Data Lake**, generated REST APIs for data extraction, and used **Kafka** for data streaming.
- Enhanced application security features using **GS-spring security and OPA** and Automated deployment using Kubernetes and Gitlab, maintained logs for tracking.
- Handled production activities for deployments, maintaining High Availability and Fault Tolerance systems.

Web Developer
Center for Technology in Government

Oct 2020 - Mar 2021

- Designed and developed a Django app, collating around 50k gallery entries from **AWS RDS**, filtering by 20 quality standards.
- Experience in Cloud Services like AWS Elastic Compute Cloud (**EC2**), and Simple Storage Service(**S3**).
- Designed a database model for 2TB data in S3 and around 500k records in **PostgreSQL** using RDS in AWS.
- Implemented REST APIs for uploading and retrieving Multipart files using **Amazon S3** and containerized the application using **Docker**.

Associate Software Engineer
Optum Global Solutions(UHG)

Jul 2017 - Dec 2018

- Developed microservices using Spring-Boot for Healthcare applications (EZCOMM MNR & ISET services) that facilitate user logins and doctor appointment scheduling.
- Designed and implemented the **UI/UX** of a few pages of the application using the **Angular framework**.
- Involved in Requirements gathering, Analysis, Design, Development, and unit testing of applications using an **AGILE methodology (SCRUM)**.
- Reduced manual efforts by Automating a compliance report, which sends an email about the status of tickets to the business users daily.
- Knowledgeable in deploying the application to **AWS EBS** via Jenkins, monitoring logs with **AWS CloudWatch**, testing the application performance with **JMeter**, and ensuring 75% efficiency.

Software Engineer Intern
OpenText

Jan 2017 – Jun 2017

- Worked on a POC, building a UI to broadcast a group message to all followers of a user at once on Instagram following Instagram's authentication protocols.
- Collaborated in daily stand-ups, monitored requirements via Jira Kanban, and participated in knowledge transfer sessions.
- Utilized Angular2 components such as Controllers, Services, Directives, and Routing.
- Built Rest APIs using Node JS, and Mongo and integrated with Angular using **MVC** design patterns (**MEAN Stack**).

ACADEMICS

University at Albany
Masters in Computer Science

Albany, NY
Aug 2019 - May 2021

- **Honors:** Received Graduate Research Assistantship (top 3%) at Center for Technology in Government (CTG).
